Summary

Results-driven Senior Android Developer with 4+ years of expertise in Kotlin and Java, specializing in fintech, multilingual, and consumer-facing mobile applications. Demonstrated track record of architecting high-performance Android apps using MVVM, Clean Architecture, Jetpack Compose, and Coroutines. Experienced in end-to-end delivery — from KYC onboarding and third-party SDK integration to REST API integration, Firebase, and Dependency Injection (Hilt/Dagger). Adept at leading cross-functional teams and delivering secure, scalable solutions for regulated fintech environments across Pakistan, KSA, and UAE markets.

Experience

YAP Mobile Wallet

Lahore, Pakistan

Software Engineer - Android

04/2024

<https://play.google.com/store/apps/details?id=com.yappakistan.app&hl=en>

- Integrated a Flutter SDK for CNIC scanning and liveness detection within the native Android app, enabling secure customer identity verification and reducing onboarding fraud risk.
- Engineered robust fintech features covering token lifecycle management, secure customer data storage, and zero-trust data privacy enforcement, ensuring compliance with financial data regulations.
- Developed and optimized reusable Jetpack Compose UI components (persistent bottom sheets, custom dialogs), reducing UI-related crash rates by 25% and improving component reuse across teams.
- Maintained a clean, scalable codebase using Kotlin, MVVM / Clean Architecture, and Hilt (Dependency Injection) across cross-functional teams, improving code review cycle time by 20%.
- Collaborated with backend engineers on REST API integrations and Firebase-based real-time data flows, enhancing app reliability and feature delivery speed.

Digitify

Lahore, Pakistan

Android Developer

09/2023

- Developed and delivered Android features for YAP KSA and YAP UAE — two separate fintech wallet applications — focusing on customer KYC onboarding and Flutter SDK-based CNIC scanning and liveness verification, reducing onboarding time by 30%. <https://yap.com/>
- Mentored and managed a team of 4 Android developers, driving Agile/Scrum sprint planning and delivering 3+ successful project milestones on schedule.
- Integrated Financial APIs and third-party identity verification SDKs to streamline KYC regulatory compliance workflows across KSA and UAE markets.
- Implemented MVVM architecture and Jetpack Navigation Component, improving codebase maintainability and reducing regression bugs by 20%.

Self employed (freelancing)

Android App Developer

08/2023 - 08/2024

- Delivered end-to-end Android development for Dirxi — a ride-booking application — designing and implementing the complete ride booking UI from scratch using Kotlin and Jetpack Compose. <https://dirxi.com>
- Led codebase revamping on Dirxi, migrating legacy code to Clean Architecture and MVVM, reducing technical debt by an estimated 40% and improving long-term maintainability.
- Integrated REST APIs and optimized data-fetching layers using Kotlin Coroutines and Flow, reducing screen load times by 35%.
- Maintained an average crash-free rate of 98% across delivered apps through rigorous performance testing and proactive bug resolution.

Acclivousbytes

Lahore, Pakistan

Android Developer

02/2023 - 09/2023

- Developed Ikram — a GPS-based cemetery locator app for Saudi Arabia — enabling Muslims to locate graves of loved ones across organized cemeteries worldwide using real-time GPS and map integrations. <https://play.google.com/store/apps/details?id=com.ime.alikram&hl=en>

- Built Al-Kazi — an Arabic family social platform — delivering content sharing, image posts, family news feeds, and in-app chat features for Arabic-speaking families, using Kotlin and Firebase. <https://play.google.com/store/apps/details?id=com.ime.alkadi&hl=en>
- Developed Al-Jumaih — a Saudi family networking app — featuring a comprehensive digital database of family members, document and manuscript preservation, and family cohesion tools to connect Al-Jumaih family members across all regions of Saudi Arabia. <https://play.google.com/store/apps/details?id=com.ime.aljumaih>
- Built Al-Rais — a family heritage and genealogy reference app — delivering documented family history, lineage records, and notable personalities for the Al-Rais family (700,000+ members worldwide), with roots in Hajar al-Yamamah, central Saudi Arabia. <https://play.google.com/store/apps/details?id=com.ime.alrais>
- Developed a German-language kitchen order management app for restaurant order-taking machines — similar to a chef-side food delivery system — where staff punch orders that flow through Received, Preparing, and Delivered states in real time, built end-to-end in Kotlin with a custom order lifecycle management system.
- Analyzed client requirements and delivered 4 custom Android applications from scratch, reducing average project delivery time by 20% through Agile iteration.
- Led a team of 3 developers, implementing Kotlin, Java, REST APIs, and Firebase across diverse technology stacks for end-to-end delivery.
- Optimized app performance through code refactoring and UI rendering improvements, reducing average app load time by 30%.

Synavos Solutions

Lahore, Pakistan

Android Developer

04/2021 - 02/2023

- Developed core Android features for TicketLake — an event ticketing platform — including ticket browsing, purchase flows, and QR code scanning using Kotlin and Android SDK. <https://ticketlake.com>
- Optimized RecyclerView performance and image-loading pipelines for TicketLake, reducing scroll jank and improving UI rendering smoothness by 30%.
- Implemented Firebase Analytics and Firebase Cloud Messaging (FCM) for push notifications, increasing user re-engagement by 18%.
- Maintained clean, reusable code using Kotlin and Android SDK, enhancing app scalability by 15% across multiple projects.
- Resolved 50+ critical production bugs, reducing crash rates by 35% and improving Play Store ratings.
- Integrated 10+ third-party APIs and libraries, expanding app functionality and increasing user engagement by 20%.

Education

University of Punjab

Lahore

Bachelor of Information Technology

Lahore College of Women University

Lahore

Intermediate in Computer Science

Skills

Languages: Kotlin · Java

Architecture & Patterns: MVVM · Clean Architecture · Repository Pattern · MVI

Frameworks / Jetpack: Jetpack Compose · Navigation · Room · ViewModel · LiveData · WorkManager · DataStore · Fragments · Deep Linking

Async & Reactive: Kotlin Coroutines · Flow · RxJava

Dependency Injection: Hilt · Dagger 2

Networking & APIs: Retrofit · OkHttp · REST APIs · Financial APIs · Third-Party Libraries

Tools: Firebase · HMS · Sockets · Android Studio · Git · Jira · Agile/Scrum

Security & Compliance: CNIC Scanning · ML Kit · Token Lifecycle Management · Secure Data Storage · KYC Onboarding

Testing: JUnit · Espresso · Mockito
